

Empirical GC-Olfactometry Training Course

Your Sample Material and Operators – Our Equipment – New Approaches

Seeking for a non-theoretical GCO training course
handling your sample material?

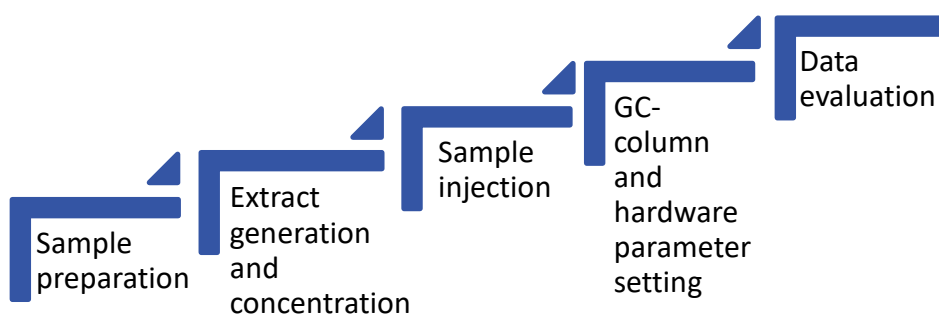

Looking for new compounds in your samples?

Testing alternative analytical approaches
without changing existing set-up in your lab?

Checking the performance of new instrumentation
and methodologies before investing?

We are offering an exclusive training course covering different aspects of advanced gas chromatography olfactometry. During that course we are treating your sample material.

All influencing parameters will be discussed and the course content will be adapted to your demands on:

This training is made available at FlavoLogic facilities. We have the flexibility to test on our equipment or easily install new equipment.

Depending on the specific needs we shift priorities to topics of highest interest and teach participants in a workshop atmosphere.
